

Backend Assignment

Design and Implement a solution to ingest feedback records from various sources

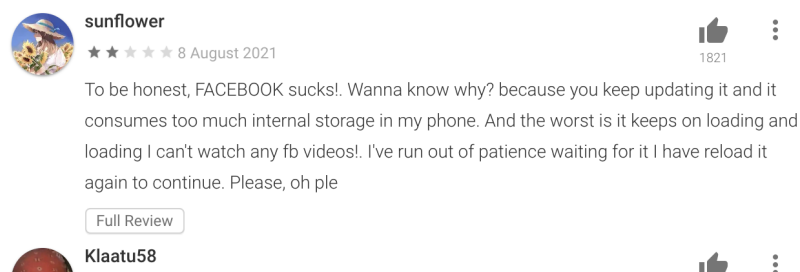

Must Support

- Heterogeneous feedback sources, e.g

▼ Intercom

▼ Playstore

▼ Twitter

▼ Discourse Posts

If you have lots of long category names, you should be able to expand the width on your site via CSS.

In the current state, with "all categories", the selector is very, very narrow, plus the number of topics reduces even more the category names length.

Gene... 32635

If you've selected a category with a few letters, it becomes a bit ridiculous. Here on meta:

- Push and Pull Integration Model
- Metadata Ingestion: each source can have different types of metadata values, e.g app-version from Playstore, Country from Twitter, etc.
- Multi-tenancy
- Transformation to a uniform internal structure, which should
 - Support different type of feedback data e.g Reviews, Conversations etc
 - Support source-specific metadata
 - Have common record-level attributes like record language, tenant info, source info, etc

Sample External Source API:

To test out the implementation, the following APIs from the Discourse can be used

▼ Search post in a time range

Sample Request:

```
curl --location --request GET 'https://meta.discourse.org/search.json?page=1&q=after%3A2021-01-01+before%3A2021-02-20'
```

Sample Response:

```
{
  "posts": [
    {
      "id": 875475,
      "name": "Joshua Rosenfeld",
      "username": "jomaxro",
      "avatar_template": "/user_avatar/meta.discourse.org/jomaxro/{size}/126216_2.png",
      "created_at": "2021-01-18T21:13:50.793Z",
      "like_count": 6,
      "blurb": "https://github.com/discourse/discourse-encrypt/pull/62 Fix merged . Text is now Encryption disabled - unsupported for group messages image Update the encrypt plugin on your site to see the updated tex...",
      "post_number": 139,
      "topic_title_headline": "Discourse Encrypt (for Private Messages)",
      "topic_id": 107918
    },
    {
      "id": 872227,
      "name": "",
      "username": "taher1",
      "avatar_template": "/user_avatar/meta.discourse.org/taher1/{size}/182563_2.png",
      "created_at": "2021-01-11T03:24:05.977Z",
      "like_count": 1,
      "blurb": "I've setup email feedback forwarding as described in the post for SES but I'm not getting bounce notifications in discourse. Do i need to create a sns webhook? Or do I need to enable VERP? Please help...",
      "post_number": 173,
      "topic_title_headline": "Handling bouncing e-mails",
      "topic_id": 45343
    }
  ]
}
```

Returns a list of posts that were made in the specified time range

You can use the `id` and `topic_id` from each post to fetch the actual post, using the next API

▼ Get Individual Post

Sample Request:

```
curl --location -g --request GET 'https://meta.discourse.org/t/45343/posts.json?post_ids[]=872227' \
--data-raw ''
```

Sample Response:

```
{
  "post_stream": {
    "posts": [
      {
        "id": 872227,
        "name": "",
        "username": "taher1",
        "avatar_template": "/user_avatar/meta.discourse.org/taher1/{size}/182563_2.png",
        "created_at": "2021-01-11T03:24:05.977Z",
        "cooked": "<p>I've setup email feedback forwarding as described in the post for SES but I'm not getting bounce notifications in discourse. Do i need to create a sns webhook? Or do I need to enable VERP? Please help.</p>",
        "post_number": 173,
        "post_type": 1,
        "updated_at": "2021-01-11T03:25:21.625Z",
        "reply_count": 1,
        "reply_to_post_number": null,
        "quote_count": 0,
        "incoming_link_count": 0,
        "reads": 31,
        "readers_count": 30,
        "score": 26.2,
        "yours": false,
        "topic_id": 45343,
        "topic_slug": "handling-bouncing-e-mails"
      }
    ],
    "id": 45343
  }
}
```

Good to Have

- Idempotency: Ability to de-dupe ingested feedbacks
- Supporting multiple feedback sources of the same type for a tenant, e.g feedback from two different Playstore Apps for the same tenant

Evaluation Criteria

- Quality of Code
- The number of requirements addressed
- Extensibility of code, e.g how easy it would be to add a new type of feedback source
